

PACKAGING

Cost effective, high performance solutions

PACKAGING ALL WRAPPED UP

Technical competence combined with a flair for creativity means Wincanton delivers cost effective, high performance packaging solutions every time.

We understand that high value products and potentially fragile components need maximum protection from possible damage.

Unique or unconventional products might demand bespoke solutions which are sufficiently sophisticated and flexible to accommodate short notice requirements and swift transportation through challenging situations.

Wincanton designs, manufactures and supplies specialised protective packaging for the safe transit of equipment into the harshest of environments. Whether you need to transport a single item or you are looking for a total support package we can provide a large range of packaging services to ensure both physical and environmental protection of your equipment regardless of size, shape or location.

The innovation and excellence Wincanton applies to the design and manufacture of highly specialised packaging solutions puts us in a unique position to meet even the most complex industry packaging requirements.

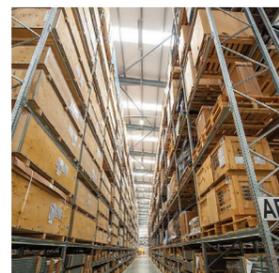

KEY FEATURES

- Our teams are trained to manage the complete packaging lifecycle, from the initial design and manufacture through to assembly, transport, offloading, packing, reloading and refurbishment
- Our highly professional design team uses the very best in CAD technology to provide innovative packaging solutions to offer optimum protection for your product both in transit and from environmental hazards
- With in-house packaging manufacturing centres around the UK we can design and manufacture bespoke solutions to fit our customer's needs. No matter how large, small, fragile or dangerous, each solution is designed to withstand the most extreme temperatures and rough handling

KEY BENEFITS

- Cutting the cost of damaged products
- Flexible/custom designed packaging for unique products
- Swift unloading
- Post-transport product reliability assured
- Flexibility to pack on our premises or elsewhere and refurbish/customise customer packaging if required
- Advanced transport logistics service makes us specialists in delivering securely and efficiently either within the UK or overseas
- We can offer 'just in time' solutions using 'kanban' principles (a supply chain inventory control scheduling system) to minimise storage requirements

Nothing too big or too small

Our teams are experienced in selecting the best possible materials and can source a variety of alternatives to match your specific needs which include:

- corrugated fibreboard
- die-cut foams or plastics
- timber cases and special pallets
- aluminium containers
- metal foil laminates with desiccant for environmental protection
- reusable bags in heavy duty PVC

We are committed to using sustainable or re-usable materials where possible to reduce environmental impact.

We have specialised skills in protecting fragile items and hazardous goods and making creative use of resources plus our heavy lifting capability means no job is too large.

BACKED BY THE MOD

We have over 50 years' experience providing packaging solutions for the defence industry meaning we are specialised in the careful planning, design and manufacture of highly technical solutions. This enables us to transfer invaluable knowledge and expertise to any other environment or service.

SUPPORT SERVICES

As the UK's leading provider of end-to-end supply chain solutions, we have skilled and knowledgeable specialists on hand to support customers in a wealth of supplementary areas in addition to packaging fulfilment.

We can provide off-site and on-site labour to help with bulky or fragile items, and can offer a full range of supplementary resources for project work. This means we are able to provide complete end-to-end logistical solutions, covering all your requirements from warehousing and project management, as well as the transport and distribution of packaged goods.

DEMONSTRATING OUR CAPABILITIES

Wincanton delivers value, operational excellence, innovation and high performance to all our customers.

ASM Assembly Systems is a world-leading supplier of semiconductor assembly and surface mount technology (SMT) equipment with a global presence in more than 30 countries. ASM Assembly Systems operates in three business segments; Leadframe solutions, Backend Solutions and SMT Solutions.

With a relationship spanning 35 years, ASM Assembly Systems and Wincanton have a well-established process for developing bespoke packing solutions based on evolving business needs. ASM Assembly Systems builds all its machines on the same base frame which means that although the technology changes, the packaging solutions require only minor adaptations to fit new requirements.

Wincanton's packaging design team considered all aspects of the machine, size, weight, fragility and any other vulnerable features such as static sensitivity. This approach ensured the packaging covered all requirements fully and represented the best value for money. One box built for ASM Assembly Systems using this specification was 1.8x1.8m and capable of accommodating four different machine types and provided the required protection for long haul and international transport. In addition, sea freight boxes have additional requirements and are further engineered to provide added protection and lined with metal foil laminate to prevent the ingress of moisture.

- Longevity built in to each packaging type
- No incidence of machine damage in over 5 years
- Quick turnaround with new packaging solutions requiring only minor changes
- Best utilisation of transport by minimising size and weight of the packaging
- Based on strong working relationship between the two companies.

WHY CHOOSE WINCANTON?

Through our experience, we know that every logistics solution is different. We work closely with our customers to understand their markets so that we can tailor solutions that fit their specific requirements.

ABOUT US

Wincanton is the largest British third party logistics and supply chain solutions provider in the UK and Ireland. With a £1.1bn annual revenue, we operate from over 200 sites with more than 6.6m sq ft of warehousing space, 17,500 employees and 3,600 vehicles. This means we have the scale and infrastructure to provide cost-efficient, flexible solutions for our customers.

Despite our scale we have always promoted the customer centric approach of a small business. We understand that every logistics solution is different and we work closely with our customers to create tailor-made solutions that fit specific requirements.
