## Revolutionising X-ray

People, technology and products were the focus for the Adaptix website which was developed as part of the company's new graphic identity using Wix.com.

## Features

Contemporary, accessible, warm.

### Less dose, more data

Adaptix provides technology to create a future in which low-cost X-ray solutions are fully portable with a reduced system footprint, maximising their deployment in secondary care and making them available in primary care and even to field-based users. The company has been supported by bodies such as Innovate UK and the UK Science and Technology Facilities Council in recognition of the potential for its novel technology to transform healthcare and disrupt a global industry.

**Our products**  
The benefits  
True Portability – Bringing X-ray to the patient  
Fast and affordable low-dose 3D imaging  
Enhanced diagnostic information versus planar X-ray

**Our people**  
Meet the team  
Our team includes hardware, software, business, project and product leaders backed by an internationally recognized board of advisors.

### Our products

**Introducing PixelX**  
PixelX is our Flat Panel X-ray Source. There are two variants, one with a conventional high voltage power supply, and one with a new novel and innovative high voltage supply for enhanced portability.

**Introducing TomoX**  
Our reconstruction software 'TomoX' is a plug-in for existing acquisition workstations that manage the resulting DICOM files imported as DIC or RT to the same way that any other medical imaging hardware.

The multiple variants of the PixelX source means the beam can be adjusted to suit different sizes with a range of possible field geometries, so special software is integral to the image reconstruction.

Product	Dimension	Use
PixelX 100	Source: 10cm x 12cm	General Radiology
PixelX 200	Source: 20cm x 20cm	Orthopaedics, Mammography
PixelX 400	Source: 40cm x 40cm	General Radiology

The multi-variant X-ray technology features multiple small size beams enabling the PixelX Flat Panel Source to be positioned closer to the patient. This gives benefits such as:

- A reduced total power requirement
- A reduced risk to clinical staff from scatter

PixelX Flat Panel X-ray source and associated software are components available to be integrated with legacy systems manufacturers. System manufacturers are responsible for providing and configuring their products for standard and non-standard applications requirements.
